

**ABSTRACT**

A cigarette pack with a shell (10) and slide (11), the range of movement of the slide (11) within the shell (10) is limited, in particular by stops formed, on the one  
5 hand, on a stop tab (30) and, on the other hand, by a recess (34) in the shell (10).  
The stops help to define a closed position of the slide (11) and an open position.
